

1. Crypto: Credentials

After downloading the file, I got a zip file named *Leak_stuff.zip*.
Extracting the file, I get a folder containing two txt files; *user.txt* and *passwd.txt*.
I copy both contents of the files and paste them on a spreadsheet side by side.
Using the 'Find' tool, I searched for the username of 'osman'.

I copy the password and paste it on CyberChef.
I know the 'ZJPB' must be 'WGMY', hence it is a substitution cipher.
I use the ROT13 and play around with the amount until I get 'WGMY'.
