# 1. Misc: Invisible Ink

After downloading a file, I got a gif file named *challenge.gif*.
I open the gif file using StegSolve.
I use the 'Frame Browser' tool to view all the frames.
Using that tool, I'll get 7 frames total.
Out of the 7 frames, frame 5 and 6 looked different so I saved both of them.

I open the 5th frame using StegSolve, and play around with the filter until I get the clearest photo. Do the same thing with frame 6.

Using the 'Image Combiner' tool, I combine these two photos to get the flag.
